

Have you been
diagnosed with
migraine
headaches?

Have you:

- Had migraines for more than 12 months?
- Tried preventative drugs but still have migraines?

Are you:

- Between 18 and 70 years old?

If you answered yes to all of these questions you may be able to participate in a new clinical research trial called **ESCAPE**, sponsored by St. Jude Medical.

The trial may help find a new treatment for migraine sufferers.

Several clinical experiences have shown an association between the presence of a PFO (patent foramen ovale)—a small hole in one of the heart's chambers—and migraine headaches. The **ESCAPE** Migraine trial is designed to study whether closing this defect will help migraine sufferers.

*Ask your physician—are you right for **ESCAPE**?*
